Add Restaurant

<include>

ChangeItemPrice
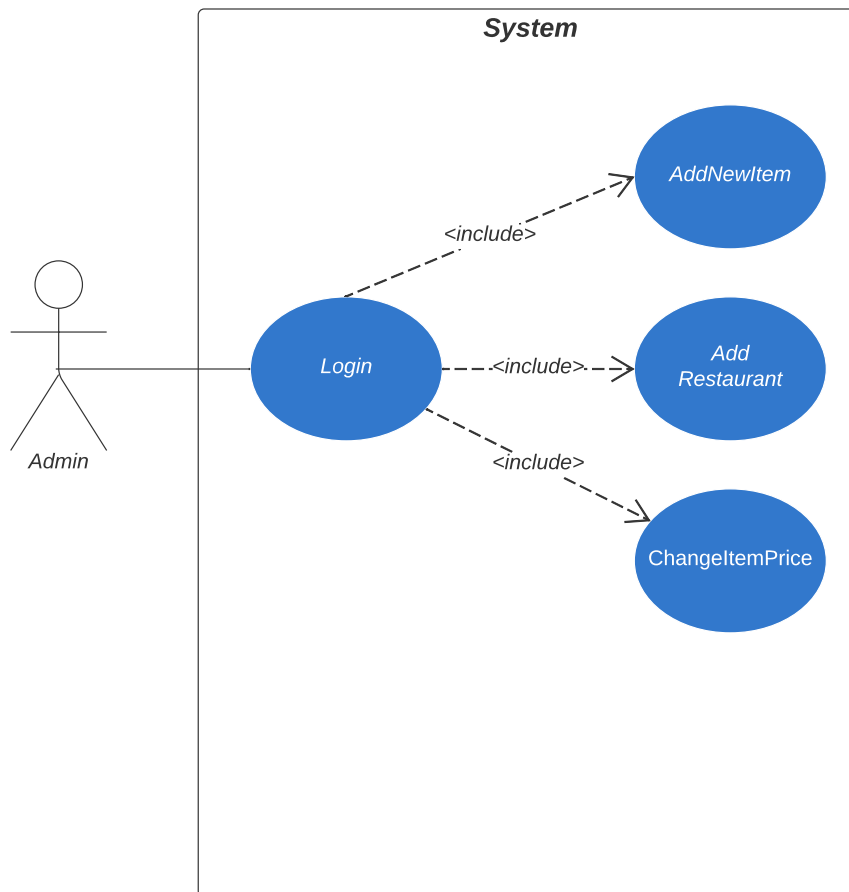

Admin is able to use the program normally before logging in. Once the admin has logged in two hidden buttons appear. The first buttons allows the admin to add a new restaraunt from an input file. In the next button the admin is able to add a new item to a specific restaurant. Lastly the admin is able to directly change an items price from the menu. Anything the admin changes or adds will be done to the database.
